

There are many easy ways to create a web link to a folder of images of your art. Here are a few:

Google Photos. Select the photos of your art. Select Create a new folder. Give it a name. Select Share. Select Copy Link. Link sharing will say "Let anyone with the link see photos and people in this album." Copy the link, paste into the form, or email text.

Google Drive. Create a folder. Upload (or copy) photos to the folder. Select Share. Select General Access dropdown: Anyone with the link. Select Copy Link. Paste into the form or email text.

Dropbox. Create a folder. Upload (or copy) photos to the folder. Right click the folder. Select Share. Select Create Link. It should say, "Anyone with this link can view the folder." Copy the link, paste into the form, or email text.

OTHERS: You can use any service that allows sharing a link to photos on the web. iCloud, Amazon photos, Photobucket, Shutterfly, Microsoft OneDrive, Flickr, all offer photo sharing.
